

WEEK – 10

DURATION: 16 March 2026 – 20 March 2026

DAY 1: 16 March 2026

1. TASKS WORKED ON

- **Occulya Website Updates:** Worked on updating multiple sections and UI elements of the Occulya website to improve visual appearance and overall structure. The updates included:
 - Updated cover photographs for all website pages
 - Applied small UI improvements and design refinements
 - Renamed the “Jyotish” page to “Astrology” page
 - Performed minor content and layout edits as per requirements
 - Added a new Prediction section on the main page
 - Created the predictions.html page

2. LEARNING AND KNOWLEDGE GAINED

Today, I revised my frontend development concepts related to HTML, CSS, and JavaScript while working on real-world website updates and UI modifications. I also improved my understanding of website structure management, page consistency, and responsive design adjustments.

3. PLAN FOR NEXT DAY

- Continue working on the predictions.html page.
- Learn additional concepts related to React and component-based development.

DAY 2: 17 March 2026

1. TASKS WORKED ON

- **Occulya Website Updates:** Worked on improving the structure and navigation of the Occulya website by updating page sections and navigation links. The updates included:
 - Added the Shop section in place of the Predictions section
 - Created the Prediction.html page
 - Added Prediction.html to the navigation bar across all pages
- **Dynamic Profile Card System:** Created a reusable React component system to display user profile cards dynamically using props such as name, age, role, and image. Implemented conditional rendering to display “Adult” or “Minor” status based on age.
- **Component-Based Product List:** Built a component-based product listing application using ProductList and ProductItem components. Implemented dynamic product availability display using props and conditional rendering.

2. LEARNING AND KNOWLEDGE GAINED

Today, I revised my understanding of React fundamentals including components, props, import/export concepts, and dynamic expressions. I also strengthened my practical understanding of reusable component architecture and dynamic rendering within React applications.

3. PLAN FOR NEXT WORKING DAY

- Continue working on the predictions.html page.
- Learn additional React concepts related to state management and hooks.

DAY 3: 18 March 2026

1. TASKS WORKED ON

- **Occulya Website Enhancements:** Worked on enhancing the Predictions page by updating visuals and adding structured prediction content. The updates included: Added a cover photograph to the predictions.html page and added a Predictions section containing three flashcards with images and descriptive content
- **Live Input Preview:** Implemented controlled input handling where user-entered text is displayed dynamically using onChange events and state updates.
- **Simple Todo List:** Developed a basic Todo List application using array-based state management and dynamic rendering with the map() function.
- **Form Submission Handling:** Created a form-based application to collect, manage, and display user data using React form handling concepts.

2. LEARNING AND KNOWLEDGE GAINED

Today, I revised React concepts related to components, props, expressions, and useState(). I also strengthened my understanding of state management, dynamic rendering, controlled components, and reusable component development through practical implementation tasks.

3. PLAN FOR NEXT WORKING DAY

- Continue improving the predictions.html page.
- Learn additional React concepts and improve practical implementation skills.

DAY 4: 19 March 2026

1. TASKS WORKED ON

- **Occulya Website UI Updates:** Worked on enhancing the UI of the Predictions page by updating images, improving alignment and spacing, and adding a YouTube icon for the Hindi channel to create a more polished user experience.
- **React Todo App Development:** Developed a Todo Application in React with task and sub-task management features, including adding, editing, deleting, and marking items as completed. This helped strengthen my understanding of state management and dynamic UI updates in React.

2. LEARNING AND KNOWLEGE GAINED

Today, I revised and strengthened my understanding of React concepts by building a functional Todo application with task and sub-task management features. I also improved my practical understanding of state handling, array manipulation, conditional rendering, and dynamic UI updates within React applications.

3. PLAN FOR NEXT WORKING DAY

- Optimize the Todo App codebase and improve application structure.
- Learn additional advanced React concepts and best practices.

DAY 5: 20 March 2026

1. TASKS WORKED ON

- **Occulya Website Updates:** Worked on enhancing the Contact and Membership pages by updating multiple sections, improving content layout, and refining the overall design for a more consistent and user-friendly experience.
- **Advanced Todo App Development:** Enhanced the Todo Application by implementing advanced sub-task management, task completion synchronization, and navigation features. Additionally, reviewed the codebase to analyze code quality and identify improvements for better React development practices.

2. LEARNING AND KNOWLEDGE GAINED

Today, I improved my understanding of advanced state management and dynamic UI rendering in React applications through the implementation of a feature-rich Todo application. I also strengthened my frontend development concepts related to HTML, CSS, JavaScript, and React while working on real-world UI enhancement tasks and application logic implementation.

3. PLAN FOR NEXT WORKING DAY

- Learn additional advanced React concepts and optimization techniques.
- Continue improving project structure and reusable component implementation.
