

WEEK – 11

DURATION: 23 March 2026 – 27 March 2026

DAY 1: 23 March 2026

1. TASKS WORKED ON

- **Occulya Website Updates:** Worked on enhancing the UI and visual appearance of the Occulya website by updating page cover images, modifying flashcard visuals, and making design refinements to improve overall consistency and user experience.
- **Study of useEffect() Hook:** Learned how the useEffect() hook is used to handle side effects and manage component lifecycle events in React. Also gained an understanding of the mount, update, and unmount phases, along with implementing cleanup operations using useEffect().

2. LEARNING AND KNOWLEDGE GAINED

Today, I revised my understanding of frontend development concepts including HTML, CSS, JavaScript, and React. I also gained deeper understanding of the useEffect() hook, component lifecycle management, and side-effect handling within React applications.

3. PLAN FOR NEXT WORKING DAY

- Learn additional React hooks and lifecycle-related concepts.
- Continue improving understanding of React state and component management.

DAY 2: 24 March 2026

1. TASKS WORKED ON

- **React Lifecycle & useEffect() Concepts:** Completed the study of React component lifecycle management using useEffect() and learned how to handle mounting, updating, unmounting, and cleanup operations. Also practiced lifecycle concepts through small React tasks to strengthen my understanding of effect execution and component behavior.
- **Study of useRef() Hook:** Learned and implemented the useRef() hook for DOM manipulation, input handling, and tracking previous values in React applications. Also explored the differences between useRef() and useState() and applied advanced focus management techniques in a Todo application.
- **Custom Video Player Project:** Started working on a Custom Video Player project and analyzed its structure and implementation flow. Explored features such as play/pause controls, speed adjustment, volume management, and fullscreen functionality.

2. LEARNING AND KNOWLEDGE GAINED

Today, I gained deeper understanding of React component lifecycle behavior and the practical usage of useEffect() for managing side effects and cleanup operations. I also learned how useRef() can be used for DOM manipulation, persistent value storage, focus handling, and optimization without triggering unnecessary component re-renders.

3. PLAN FOR NEXT WORKING DAY

- Complete the implementation of the Custom Video Player project.
- Explore additional React hook concepts and advanced frontend patterns.

DAY 3: 25 March 2026

1. TASKS WORKED ON

- **Custom Video Player Project:** Continued working on the Custom Video Player project and explored functionalities including video playback controls, speed adjustment, volume management, and fullscreen handling.
- **Website Content Gathering:** Worked on gathering and organizing content for the website by updating and editing information from the old website according to the provided reference design. The updated sections included: Home Page content and Contact Page content
- **Study of Custom Hooks:** Learned the basics of creating reusable Custom Hooks in React and developed a useCounter() hook for managing counter functionality. Also revised key React Hooks, including useState(), useEffect(), and useRef().

2. LEARNING AND KNOWLEDGE GAINED

Today, I revised and strengthened my understanding of React hooks including useState(), useEffect(), and useRef().

I also learned how custom hooks can be used to encapsulate reusable logic and simplify component-level state management in React applications.

3. PLAN FOR NEXT WORKING DAY

- Explore advanced custom hooks and related React patterns.
- Continue content gathering for remaining website pages.
- Learn concepts related to HOCs, HOFs, debouncing, and throttling.

DAY 4: 26 March 2026

1. Tasks Worked On

- **Custom Video Player Project Enhancement:** Continued reviewing and analyzing the implementation flow of the Custom Video Player project, including playback controls, focus management, and video interaction features.
- **Website Content Gathering:** Worked on content structuring and editing for the website by updating and organizing content for the Home and Contact pages based on the provided design and layout requirements.
- **Advanced Custom Hooks Study:** Revised Custom Hook concepts and reviewed the implementation of the useCounter() hook to strengthen my understanding of reusable logic in React. Also revisited key React Hooks, including useState(), useEffect(), and useRef(), to improve conceptual clarity.

2. LEARNING AND KNOWLEDGE GAINED

Today, I improved my understanding of reusable React architecture through practical implementation of custom hooks and revision of core hook concepts. I also strengthened my understanding of modular frontend development and efficient component-level logic handling.

3. PLAN FOR NEXT WORKING DAY

- Explore advanced React concepts such as HOCs, HOFs, debouncing, and throttling.
- Continue working on website content organization and frontend improvements.

DAY 5: 27 March 2026

1. TASKS WORKED ON

- **Study of Component Composition:** Learned advanced React patterns for building reusable and maintainable components. Explored Component Composition, the Children Prop pattern, Compound Components, and the Render Props pattern to improve code reusability and component communication.
- **Netsquare Softwares Website – Content Gathering:** Worked on collecting and updating content for the Netsquare Softwares website based on the provided design references. Updated multiple service pages, including Web Development, App Development, AI Development, Software Development, Digital Marketing, Graphic Designing, and Paid Ads Promotion.

2. LEARNING AND KNOWLEDGE GAINED

Today, I explored the concept of Component Composition and learned how patterns such as Children Props, Compound Components, and Render Props help in building flexible, reusable, and scalable UI structures in React applications

3. PLAN FOR NEXT WORKING DAY

- Learn additional advanced React concepts and reusable component patterns.
- Continue content gathering for the remaining pages of the Netsquare Softwares website.
