

WEEK – 15

DURATION: 20 April 2026 – 24 April 2026

DAY 1: 20 April 2026

1. TASKS WORKED ON

1.1 Interview Process

- **Technical Interview Participation:** Participated in the interview process and discussed technical concepts related to web development, frontend technologies, backend fundamentals, and project-based problem-solving approaches.
- **Communication & Project Discussion:** Explained previous project work, implementation approaches, and understanding of modern development workflows during the interaction.

2. LEARNING AND KNOWLEDGE GAINED

Today, I gained experience in professional technical communication and understood the importance of explaining project logic, implementation strategies, and development workflows clearly during interviews.

I also improved my confidence in discussing frontend and backend concepts in a practical and structured manner.

3. PLAN FOR NEXT WORKING DAY

- Start working on live projects and improve practical development skills.
- Continue learning modern frontend and backend workflows.

DAY 2: 21 April 2026

1. TASKS WORKED ON

- **NetSquare Official Website – Content & UI Improvements:** Worked on updating and refining content across multiple sections of the NetSquare website to improve clarity and presentation. Also enhanced the UI/UX by optimizing carousel behavior, improving scroll interactions, and creating a smoother overall user experience.

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned how small UI refinements such as smoother scrolling, cleaner carousel behavior, and transition improvements can significantly enhance overall user experience.

I also improved my understanding of structuring website content section-wise to maintain readability, visual balance, and better user engagement. Additionally, I explored practical implementation techniques for smooth animations and UI transitions.

3. PLAN FOR NEXT WORKING DAY

- Continue working on live projects.
- Explore additional UI enhancement techniques and frontend improvements.

DAY 3: 22 April 2026

1. TASKS WORKED ON

- **Analysis of Chatbot System for “MB-USA-Trucking” Project:** Analyzed the chatbot backend built with FastAPI, LangChain, Ollama, and MongoDB to understand its workflow and financial data processing capabilities. Also explored plans for integrating the chatbot into the Trailer Tracking System to enable natural language queries for financial and lease-related information.
- **NetSquare Internship Application Website:** Worked on improving the branding and visual consistency of the internship application website. The updates included:
 - Updated logos across the platform
 - Changed website favicon
 - Applied small UI refinements for better visual consistency

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned how AI chatbots can be integrated into real-world applications using FastAPI and LangChain. I improved my understanding of how backend tools interact with structured databases and generate accurate responses using predefined logic.

3. PLAN FOR NEXT WORKING DAY

- Begin implementation planning for chatbot integration with the main system.
- Continue improving UI and functionality in live projects.
- Explore real-time data interaction between chatbot systems and databases.

DAY 4: 23 April 2026

1. TASKS WORKED ON

- **Deployment of NetSquare Softwares Internship Application on Render:** Configured and deployed the backend application on Render, set up production environment variables, and connected it with MongoDB Atlas. Also resolved deployment-related issues, updated API integrations, and tested core functionalities such as authentication, form submissions, and dashboard access.
- **AI Chatbot UI Prototype Planning for Trailer Tracking System:** Analyzed the chatbot's backend functionality and planned the structure of its user interface, including dashboard and chat features. Also explored AI-powered design tools to generate and review frontend UI prototypes for the project.

2. LEARNING AND KNOWLEDGE

Today, I learned how to deploy full-stack applications on a live server using Render and integrate them with MongoDB Atlas in a production environment. I also understood the importance of environment variables and proper API configuration during deployment.

Additionally, I explored AI-assisted UI prototyping tools and learned how clear prompt engineering can improve the quality of generated frontend designs and layouts.

3. PLAN FOR NEXT WORKING DAY

- Explore additional AI-based UI generation tools and compare their outputs.
- Analyze frontend integration possibilities with backend APIs.
- Start planning frontend implementation based on selected prototype designs.

DAY 5: 24 April 2026

1. TASKS WORKED ON

- **Planning and Understanding Tracking Bot (AI Chatbot) Frontend:** Analyzed the AI chatbot workflow and studied the backend–frontend integration to understand data flow within the Trailer Tracking System. Designed and implemented the initial chatbot UI using modern design concepts, enhanced the user experience through multiple UI refinements, and prepared detailed project documentation.

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned how to design modern AI-powered frontends using concepts such as glassmorphism, spatial UI, and dynamic rendering systems. I improved my understanding of reusable frontend architecture and component-based UI development.

Additionally, I gained knowledge about how backend APIs connect with frontend systems and how dynamic AI-driven interfaces can adapt based on generated responses.

3. PLAN FOR NEXT WORKING DAY

- Start integrating frontend UI with backend APIs.
- Implement real-time chat functionality.
- Begin development of dynamic widgets such as tables and dashboards.
