

WEEK – 17

DURATION: 04 May 2026 – 08 May 2026

DAY 1: 04 May 2026

1. TASKS WORKED ON

- **Task: MB Trailer Tracking System – UI Enhancement & Fixes:** Worked on improving the application's UI by customizing the sidebar theme, enhancing layout consistency, and refining the overall design. Also resolved theme-related icon visibility issues to ensure a consistent experience across light and dark modes.
- **Task: MB AI Software – UI & Functionality:** Enhanced the AI software's user interface by refining components and improving the overall design. Also implemented dynamic UI rendering to display content intelligently based on user input and received data.
- **Task: Backend Learning – Node.js Fundamentals:** Learned the fundamentals of backend development by creating a basic Node.js server and exploring core modules such as File System (FS) and Path for file handling and path management.

2. LEARNING AND KNOWLEDGE GAINED

Today, I improved my understanding of UI enhancement, dynamic rendering, Node.js backend fundamentals, file handling, and debugging through practical implementation and project-based learning.

3. PLAN FOR NEXT WORKING DAY

- Continue working on MB AI Software.
- Continue working on MB US Trucking project.
- Explore additional backend development concepts.

DAY 2: 05 May 2026

1. TASKS WORKED ON

- **Task: MB Trailer Tracking System – UI Enhancements & Features:** Implemented search functionality, improved page responsiveness, and enhanced scrolling behavior across multiple modules. Also resolved scrollbar-related issues to provide a smoother and more user-friendly experience when working with large datasets.
- **Task: Backend Learning – Node.js Fundamentals:** Learned the fundamentals of backend development by creating a basic server and exploring the FS and Path modules for file handling and directory path management in Node.js.

2. LEARNING AND KNOWLEDGE GAINED

Today, I worked extensively on improving UI functionality by implementing search features, enhancing responsiveness, and adding scrolling functionality across multiple modules. This helped me understand how to manage large datasets within tables and improve overall user experience.

On the backend side, I gained practical understanding of creating a Node.js server and using core modules like FS and Path for file handling and directory management.

3. PLAN FOR NEXT WORKING DAY

- Continue learning advanced backend concepts.
- Resolve remaining scrollbar-related issues across modules.

DAY 3: 06 May 2026

1. TASKS WORKED ON

- **Task: MB-USA-Trucking Project – UI Fixes & Infinite Scrolling Enhancements:**

Improved the application's UI and responsiveness by fixing theme-related issues:

- Fixed dropdown item active theme issue
- Improved Supplier page responsiveness
- Fixed Policies page responsive issues
- Implemented infinite scrolling with dynamic loading
- Applied infinite scroll functionality across dashboard modules
- Improved Edit/Delete button styling on the Customer page
- Analyzed codebase for duplicate logic and maintainability improvements

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned more about implementing professional infinite scrolling functionality in React applications, including dynamic rendering, lazy loading, loading states, and end-of-data handling. I also improved my understanding of responsive UI design, theme consistency, overflow management, and reusable implementation logic across dashboard modules.

3. PLAN FOR NEXT WORKING DAY

- Continue working on MB-AI Software.
- Explore additional backend development concepts.

DAY 4: 07 May 2026

1. TASKS WORKED ON

1.1 Task: MB-USA-Trailer – Table Sorting & Resizable Layout Enhancements

- ***Added Sorting Functionality in Tables:*** Implemented sorting functionality in Customer Table, Trailer Table, and Trailer Dashboard Table with ascending, descending, and reset sorting features.
- ***Added Resizable Feature in Tables:*** Implemented resizable functionality in Customer Module Table, Trailer Module Table, and Trailer Dashboard Table to improve flexibility while viewing large datasets.
- ***Added Resizable Layouts for Forms & Dashboard Metric Cards:*** Implemented resizable layouts for forms and dashboard metric card sections across Customer Module, Trailer Module, and Trailer Dashboard Module.
- ***UI Responsiveness & Layout Adjustments:*** Performed responsiveness fixes, spacing adjustments, and overflow handling improvements while integrating resizing functionality.

2. LEARNING / KNOWLEDGE GAINED

Today, I learned more about implementing advanced table interactions in React applications, including dynamic sorting logic, resizable layouts, and responsive dashboard behavior. I also improved my understanding of reusable component structures, UI flexibility handling, and responsive layout management during interactive feature integration.

3. PLAN FOR NEXT WORKING DAY

- Continue working on MB-AI Software.

DAY 5: 08 May 2026

1. TASKS WORKED ON

1.1 Task: MB-AI-Software – Theme Customization & Data Presentation Improvements

- **Updated Application Theme & Color Scheme:** Customized the overall application theme to align with the company's primary website design for both dark and light themes. The updates included improvements in onboarding pages, icon visibility, chatbot styling, command bar design, and company branding integration.
- **Improved Data Presentation & Typography Handling:** Enhanced the way backend data is displayed in the frontend by formatting dates, filtering empty fields, improving typography consistency, and structuring displayed information in a cleaner and more readable format.

2. LEARNING / KNOWLEDGE GAINED

Today, I gained a deeper understanding of theme customization and UI consistency in modern React-based applications. I also explored approaches for handling dynamic data presentation, typography improvements, conditional rendering, and maintaining responsive interfaces while supporting both light and dark themes.

Additionally, I improved my understanding of UI/UX consistency, theme management strategies, data formatting techniques, typography handling, and frontend responsiveness improvements.

3. PLAN FOR NEXT WORKING DAY

- Continue working on the MB-AI Software project.
- Explore additional backend development concepts.
