

WEEK – 4

DURATION: 2 February 2026 – 6 February 2026

DAY 1: 2 February 2026

1. TASKS WORKED ON

- ***Responsive Cake Webpage Completion:*** Completed a responsive Cake Webpage using HTML, CSS, and JavaScript concepts. The project focused on responsive design implementation and frontend interaction handling.
- ***React Basics Implementation:*** Learned and implemented the basic concepts of React.
- ***Card Component using React:*** Created a Card component using React concepts and component-based architecture.

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned the fundamentals of React, including its history, key features, and the differences between a library and a framework. I also explored React project setup and file structure while gaining an understanding of important concepts such as DOM vs Virtual DOM, components, and import/export mechanisms used in modern frontend development.

3. PLAN FOR NEXT WORKING DAY

Learn additional concepts related to React.

DAY 2: 3 February 2026

1. TASKS WORKED ON

- ***Counter using HTML, CSS & JavaScript:*** Created a Counter application using HTML, CSS, and JavaScript.
- ***Expressions and Props in React:*** Implemented the concepts of Expressions and Props in React through practical tasks and examples.
- ***Hooks and States in React:*** Learned and implemented the concepts of Hooks and State in React by creating a Counter application.

2. LEARNING AND KNOWLEDGE GAINED

Today, I revised previous React concepts and learned important concepts including:

- Expressions
- Props
- Hooks
- State
- Stateless Components
- Stateful Components

3. PLAN FOR NEXT WORKING DAY

Learn additional concepts related to React.

DAY 3: 4 February 2026

1. TASKS WORKED ON

- ***Flashcard using Props and Expressions:*** Created a Flashcard system using Props and Expressions in React. The implementation allowed creation of multiple cards dynamically by reusing the Card component with different props.
- ***Hooks and States Examples:*** Implemented Hooks and State concepts through multiple practical examples including:
 - Temperature Converter (Fahrenheit to Celsius)
 - Dimensions Converter (Kilometers to Meters)

2. LEARNING AND KNOWLEDGE GAINED

Today, I revised key React concepts, including expressions, props, hooks, and state management. I also strengthened my understanding of stateless and stateful components and their roles in building dynamic and interactive user interfaces.

3. PLAN FOR NEXT WORKING DAY

Learn additional concepts related to React.

DAY 4: 5 February 2026

Holiday

DAY 5: 6 February 2026

1. TASKS WORKED ON

- ***Learning CSS Animations:*** Learned how to create animations using CSS and developed a Walking Man animation project.
- ***Implementation of React Hook – useEffect():*** Implemented the concept of useEffect() through multiple practical tasks.
- ***Implementation of React Hook – useRef():*** Learned and implemented the concept of useRef() in React applications.
- ***Implementation of memo():*** Learned and implemented memo() for React component optimization and preventing unnecessary re-renders.

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned and implemented important React concepts, including the use of useEffect(), useState(), useRef(), and memo() for state management, side effects, performance optimization, and DOM references. I also explored the uuid package for generating unique identifiers and enhanced my debugging skills to identify and resolve issues more effectively.

3. PLAN FOR NEXT WORKING DAY

Learn additional advanced concepts related to React.
