

WEEK – 6

DURATION: 16 February 2026 – 20 February 2026

DAY 1: 16 February 2026

1. TASKS WORKED ON

- ***Trello-like Board Project Development:*** Created a Trello-like Board project using React Hooks and advanced React concepts, featuring Todo, Doing, and Done columns for task management. Implemented functionalities such as adding, editing, deleting, moving, and reordering cards, along with local storage synchronization, dynamic column creation, task completion tracking, and board reset confirmation.

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned and implemented advanced React concepts including:

- `useRef()`
- `memo()`
- `uuid()`
- `useEffect()` for syncing data with Local Storage

I also improved my understanding of state management, performance optimization, and dynamic UI handling in React applications.

[Blog link here](#)

3. PLAN FOR NEXT WORKING DAY

Learn additional advanced concepts related to React.

DAY 2: 17 February 2026

1. TASKS WORKED ON

- ***Trello-like Board Project Updates:*** Updated the Trello-like Board project based on received feedback and improved multiple functionalities within the application. The implemented improvements included:
 - Improved Edit Card Functionality
 - Added Exception Handling for Local Storage
 - Prevented overflow of large text inside cards
 - Added functionality to save newly created columns in Local Storage

2. LEARNING AND KNOWLEDGE GAINED

Today, I strengthened my understanding of advanced React concepts including:

- `useRef()`
- `memo()`
- `uuid()`
- `useEffect()` with Local Storage synchronization

I also improved my practical knowledge of error handling, performance optimization, and dynamic data persistence in React applications.

Updated Blog link [here](#)

3. PLAN FOR NEXT WORKING DAY

Learn additional concepts related to React.

DAY 3: 18 February 2026

1. TASKS WORKED ON

- ***Learning & Implementation of Tailwind CSS Basics:*** Focused on learning and implementing the core concepts of Tailwind CSS through practical implementation tasks and responsive layout creation.
 - Learned the basics and benefits of Tailwind CSS
 - Created a responsive mini layout project to apply learned concepts
- ***Project Planning:*** Created a rough layout and workflow structure of the main live project on paper to understand the overall architecture and UI flow.

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned the basics of Tailwind CSS and improved my understanding of responsive design concepts.

I also learned about:

- Responsive Breakpoints and Customization
- Container and Grid Systems in Tailwind CSS
- Utility-first Styling Approach
- Practical Implementation of Responsive Layouts

3. PLAN FOR NEXT WORKING DAY

Start building the actual website layout for the live project. Break the UI into reusable React components and implement the first website sections using Tailwind CSS.

DAY 4: 19 February 2026

1. TASKS WORKED ON

- ***Tailwind CSS Concepts Implementation:*** Learned and implemented important Tailwind CSS concepts within the live project. The concepts implemented included:
 - Row and Column Spanning using Grid Layout
 - Flex Layout Usage
 - Padding and Margins Utilities in Tailwind CSS
- ***Live Project Development:*** Worked on the live project by setting up the React project structure and configuring Tailwind CSS. I also developed key website sections, including the Announcement, Header, Hero, and Categories sections, to establish the foundation of the application's user interface.

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned how to effectively use Grid and Flex layouts in Tailwind CSS and improved my understanding of spacing utilities, animations, and responsive design. I also explored creating flashcard-style components using Tailwind CSS.

3. PLAN FOR NEXT WORKING DAY

Complete the remaining website sections including:

- Products Section
- Feedback Section
- Instagram Section
- Footer

DAY 5: 20 February 2026

1. TASKS WORKED ON

- **Live Project Development & Revision:** Worked on the live project and revised React and Tailwind CSS concepts through practical implementation.
- **SK-Trophy Project Home Page Completion:** Worked on the SK-Trophy live project and completed the Home Page by implementing multiple sections.
 - Categories Section
 - Products Section
 - Trending Section
 - Feedback Section
 - Instagram Section

2. LEARNING AND KNOWLEDGE GAINED

Today, I improved my understanding of how React and Tailwind CSS work together in modern frontend development. I also strengthened my practical skills related to reusable UI development, responsive design, and component-based architecture.

3. PLAN FOR NEXT WORKING DAY

Work on the remaining project pages including: Shop Page and Blog Page

GitHub Link:

WEEK – 5

DURATION: 9 February 2026 – 13 February 2026

DAY 1: 9 February 2026

1. TASKS WORKED ON

- ***Double Click Handling in React:*** Learned how to handle double-click events in React and implemented dynamic UI updates using `useState()`.
- ***Input Text Preview:*** Implemented the concept of `useEffect()` through an Input Text Preview task.
- ***Change Background Color:*** Implemented a dynamic background color changer application.
- ***Login Window:*** Started implementing a Login Window system with the planned functionalities.

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned and implemented key React Hooks, including `useState()` and `useEffect()`, to manage component state and handle side effects effectively. I also strengthened my understanding of dynamic rendering and state-driven UI updates, enabling the development of more interactive and responsive React applications.

3. PLAN FOR NEXT WORKING DAY

Complete the remaining tasks and learn additional concepts related to React.
