

## WEEK – 8

**DURATION: 2 March 2026 – 6 March 2026**

**DAY 1: 2 March 2026**

### 1. TASKS WORKED ON

- ***Interactive Product Configurator Development:*** Developed an Interactive Product Configurator that allows users to customize product options such as RAM, Storage, and Color. the system dynamically highlights selected options, displays the chosen configuration, and updates the total price based on user selections.
- ***Validation Logic Implementation:*** Worked on implementing validation logic for product configuration. The planned and partially implemented validations included:
  - A user can select only one option at a time
  - Only the selected option amount should be added to the total price
  - If a user selects 32 GB RAM, then only 512 GB Storage can be selected

### 2. LEARNING AND KNOWLEDGE GAINED

Today, I deeply understood the concepts of JavaScript DOM through the development of a real-time interactive product customization system. I also improved my understanding of dynamic UI updates, event handling, and DOM manipulation concepts.

### 3. PLAN FOR NEXT WORKING DAY

Add remaining validations and optimize the current codebase.

## DAY 2: 3 March 2026

### 1. TASKS WORKED ON

- ***Interactive Product Configurator Development:*** Developed an Interactive Product Configurator that allows users to customize product options such as RAM, Storage, and Color. the system dynamically highlights selected options, displays the chosen configuration, and updates the total price based on user selections.
- ***Validation Logic Implementation:*** Worked on implementing validation logic for product configuration. The planned and partially implemented validations included:
  - A user can select only one option at a time
  - Only the selected option amount should be added to the total price
  - If a user selects 32 GB RAM, then only 512 GB Storage can be selected

### 2. LEARNING AND KNOWLEDGE GAINED

Today, I deeply understood the concepts of JavaScript DOM through the development of a real-time interactive product customization system. I also improved my understanding of dynamic UI updates, event handling, and DOM manipulation concepts.

### 3. PLAN FOR NEXT WORKING DAY

Add remaining validations and optimize the current codebase.

## DAY 3: 4 March 2026

Holiday (Holi)

## DAY 4: 5 March 2026

### 1. TASKS WORKED ON

- ***Revision of Arrays and Objects in JavaScript:*** Revised important JavaScript concepts related to Arrays and Objects through practical exercises and examples. Strengthened my understanding of commonly used array methods, object operations, and iteration techniques for efficient data manipulation and processing.
- ***Revision of Asynchronous JavaScript:*** Revised key concepts of Asynchronous JavaScript through practical implementation and hands-on exercises. Strengthened my understanding of callback functions, promises, async-await, API handling with fetch(), and delayed execution using setTimeout().
- ***Revision of DOM Concepts:*** Revised important DOM-related concepts through practical tasks and examples.
- ***Study of Local Storage and Session Storage:*** Revised browser data storage concepts through practical examples, focusing on localStorage() and sessionStorage() for managing and persisting data in web applications.

### 2. LEARNING AND KNOWLEDGE GAINED

Today, I revised important JavaScript concepts including Arrays, Objects, Asynchronous JavaScript, DOM Manipulation, and Browser Storage concepts. I also strengthened my understanding of JavaScript fundamentals through practical implementation tasks and revision exercises.

### 3. PLAN FOR NEXT WORKING DAY

Revise destructuring concepts in arrays and continue revising React-related concepts.

## **DAY 5: 6 March 2026**

Holiday
