

WEEK – 9

DURATION: 9 March 2026 – 13 March 2026

DAY 1: 9 March 2026

1. TASKS WORKED ON

- **Local Storage vs Session Storage:** Learned the differences between Local Storage and Session Storage through practical examples. Also explored common storage methods such as `setItem()`, `getItem()`, `removeItem()`, and `clear()` for managing browser data.
- **API Docs & Expo App Basics:** Studied the basics of API documentation and the Expo App environment used in React development.
- **Basic Setup of React Project:** Learned the initial setup process of React applications and revised fundamental React concepts. Explored React features, the use of CDN links, and implemented basic React programs to strengthen practical understanding.
- **React Element Creation Tasks:** Performed practical tasks to strengthen React fundamentals, including creating React elements, nested React elements, and rendering components using `root.render()`.

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned the fundamentals of React along with the basics of API documentation and Expo App setup. I also improved my understanding of browser storage concepts including Local Storage and Session Storage through practical implementation tasks.

3. PLAN FOR NEXT WORKING DAY

Learn additional concepts related to React.

DAY 2: 10 March 2026

1. TASKS WORKED ON

- ***React Concepts Revision:*** Learned and revised multiple important React and development-related concepts. The topics covered included: CDN, crossorigin, Library vs Framework, npm, package.json, package-lock.json, Tilde vs Caret, Parcel and Babel vs Transpiler
- ***Project Work:*** Worked on the ongoing project tasks and observed the project structure and workflow.

2. LEARNING AND KNOWLEDGE GAINED

Today, I revised important React fundamentals and development environment concepts related to package management and build tools.

I also improved my understanding of API documentation and Expo App basics.

3. PLAN FOR NEXT WORKING DAY

Learn additional React concepts and continue working on the project.

DAY 3: 11 March 2026

1. TASKS WORKED ON

- ***Project Setup & Backend Integration:*** Worked on project integration by connecting the backend with the database and frontend. Also resolved API-related issues to ensure smooth communication between different parts of the application.
- ***Project UI & Module Analysis:*** Observed and analyzed the project's UI structure and workflow to understand how different modules interact within the system. Explored key modules such as Dashboard, Supplier Info, Inventory, Customer, Staff, User Management, Calling System, and Insurance.
- ***Happy Path Flow Exploration:*** Explored the complete happy path and operational workflow of the project including:
 - Phase 1 – System Setup
 - Phase 2 – Staff Onboarding
 - Phase 3 – Daily Operational Flow
 - Adding a New Customer
 - Leasing a Trailer to Customer
 - Recording Payments
 - Insurance Management
 - Staff Calling Flow
 - Returning a Trailer
- ***API Testing using Postman:*** Tested multiple APIs using Postman. The tested APIs included:
 - <http://localhost:5000/api/auth/login> – POST Method
 - <http://localhost:5000/api/auth/me> – GET Method

- <http://localhost:5000/trailers> – GET & POST Method
- <http://localhost:5000/customers> – GET & POST Method
- <http://localhost:5000/notifications> – GET Method
- <http://localhost:5000/insurance> – GET Method
- ***React Basics & Project Creation:*** Learned the basics of creating React projects using Vite and understood the purpose of different files present in the project structure. The practical tasks included:
 - Created a simple project displaying Name and URN
 - Created a project importing Header and Footer components from the components folder

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned how to create a React project using Vite and understood the purpose of various files and folders within the project structure. I also learned how to connect the backend with the frontend, test APIs using Postman, and retrieve responses from APIs. Additionally, I improved my understanding of the overall workflow and module structure of the live project.

Blog link here

3. PLAN FOR NEXT WORKING DAY

- Analyze the frontend codebase of the project and understand its workflow.
- Learn additional React concepts and continue improving project understanding.

DAY 4: 12 March 2026

1. TASKS WORKED ON

- ***Study of Cloudinary Integration:*** Studied how Cloudinary is used in the project for file uploads and storage management. Analyzed the workflow of uploading files, generating file links, and storing those links in the database through different project modules.
- ***Study of DocuSign Integration:*** Studied the purpose and functionality of DocuSign within the project. Analyzed its implementation and explored the related files to understand how document signing is integrated into the system.
- ***React Task Completion:*** Prepared a document file answering important theoretical questions related to React concepts.
- ***Occulya Website Updates:*** Made multiple small changes and improvements in the Occulya website as per the requirements.

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned how Cloudinary and DocuSign are integrated and used within real-world projects. I improved my understanding of their workflow, implementation purpose, and database integration process. I also strengthened my React knowledge through practical and theoretical tasks.

[Blog link here](#)

3. PLAN FOR NEXT WORKING DAY

- Learn additional concepts related to React.
- Review the codebase of the live project and implement the suggested changes in the Occulya website.

DAY 5: 13 March 2026

1. TASKS WORKED ON

- ***Important React Concepts:*** Learned key React concepts related to rendering and performance optimization, including DOM, Virtual DOM, React's rendering process, the Diffing Algorithm, and Reconciliation. Gained an understanding of how React efficiently updates the user interface for better performance.
- ***Profile Card Component Development:*** Created a Profile Card component using React to display candidate information, including profile image, name, role, company name, and a profile heading.
- ***Navbar Component Development:*** Created a Navbar component in React featuring a logo, search bar, and user icon, providing a clean and structured navigation interface.

2. LEARNING AND KNOWLEDGE GAINED

Today, I learned important React concepts related to Virtual DOM, rendering flow, reconciliation, and the Diffing Algorithm, while also revising and strengthening my understanding of Cloudinary and DocuSign integrations and their practical usage in live projects.

3. PLAN FOR NEXT WORKING DAY

Learn additional advanced concepts related to React.
