

JS Basics

Task1: Look at the code below. Write down what you think the output will be for A, B, and C.

```
// A. Number first
console.log(10 + 20 + "Cars");
// Output: 30Cars

// B. String first
console.log("Cars" + 10 + 20);
// Output: Cars1020

// C. String in the middle
console.log(5 + 5 + "Dollars" + 5 + 5);
// Output: 10Dollars55
```

Task2: The "Weird Math" (Coercion). Predict the result of these mathematical operations.

```
let a = "100";
let b = 10;

console.log(a + b); // Operation 1
// Output: 10010
console.log(a - b); // Operation 2
// Output: 90
console.log(a * b); // Operation 3
// Output: 1000
console.log(a / "Banana"); // Operation 4
// Output: NaN
```

Task3: Find Average

```
let eng = 80;
let math = 90;
let sci = 85;

// ERROR CODE (Do not run this, fix it):
let average = eng + math + sci / 3;
```

```
// Your Task: Fix the code above so it calculates the correct average (which should be 85).
```

```
//solution:
```

```
let average = (eng + math + sci)/3;
```
